

YEARS AHEAD IN DESIGN-YEARS AHEAD IN PLEASURE

We design every Nacra with a single ultimate objective.....speed, stability, safety. Every year we make our Nacras better, this is because we race our own products against our competition. So we never stop testing and experimenting. The end result is a state of the art performance on water. Nacra Catamarans have built a reputation as being the finest quality catamaran on the market and it is hard to believe that with all these standard features listed below that most Nacras are priced below their competitor.

Standard Features and Equipment

- **Molded white Hulls with non skid decks-ensuring longer life and easier upkeep**
- **Hinged Mast Step System-for safe raising and lowering of mast.**
- **Kick up Rudder System-rudders individually lock down and up along with automatic kick up for beaching and shallow water sailing. Our exclusive pivmatic kick up rudders let you sail right up onto the beach . The pivmatic works without cams springs or pulleys and is fool proof. The pivmatic automatically releases the rudder blades when contact is made with an underwater obstacle.**
- **Coated Shrouds-save on sail wear and help keep rigging clean.**
- **Clear Anodized Aluminium-protects and adds life to all extruded parts**
- **Fiberglass Battens-strong and durable**
- **Hull Graphics-colorful stripe package**
- **Symmetric hull Design--advanced hydrodynamic hull design moves through the water significantly faster than the out-dated banana shape hull. The V bottom reduces side slippage and the rounded aft reduces friction for instant response on the turns leaving other hull designs in your wake.**
- **Boomless Mainsail-providing simpler safer sail plan without all the inconvenience of a boom.**
- **Reinforced Hull and Deck Construction-extra structural strength were needed.**
- **Window in the Jib-extra visibility.**
- **Harken and Ronstan blocks standard on all models and the number one choice for sailors.**
- **Grey mesh Trampoline-a polypropylene mesh with ultra-violet allows for easy water drainage and wind passage for comfortable sailing**

Design

All Nacras float on top of the water making them more maneuverable, dry and stable. Speed potential is greater because of a low wetted surface area.

All Nacras have the capability of carrying more crew weight without sacrificing performance.

Full Bows and Sterns fore and aft stability prevents the boat from hobby-horsing in choppy conditions.

This smooth ride results in constant airflow over the sails for a better overall performance.

All specialized Nacra components are designed and manufactured to strict specifications.

Warranty

We have a two year limited warranty.

This gives you piece of mind that your investment is protected.

Construction

Spilt Molded Hulls eliminates the uncomfortable hull to deck seam and allows hulls to have a tear dropshape creating maximum buoyancy down low.

Internal Bonding -each Nacra Hull is hand fiberglass internally along the centre line seam to insure the strongest possible bond.

The Hulls are light, stiff and are reinforced with a bulkhead in key stress areas. Hulls are completely hand laminated.

Rudders and Daggerboards-hand laminated also with carbon reinforcement to reduce flexing and breakage.

White Gel Coat-retains shine and color longer and is easy to match when making minor repairs or filling scratches.

Corrosion Protection-Aluminium castings are drilled prior to anodization to inhibit corrosion. All extrusions are anodized to military specifications.

Quality Testing-all aluminium components are tested for strength hardness and quality of anodization before assembly.

Nacra is a worldwide Class Association. Sailors come together to socialize and enjoy exciting competition. With State/National and world Titles held. Sailing is fun whether it be for racing or recreation.

We at Nacra are very proud of our catamaran and our achievements. Most of the Catamarans on the Market today are the same old basic design the introduced decades ago with no new ideas to offer. So Why settle for a Catamaran that was hot in its day. Choose one that never stops getting better, that never stops being a pleasure. Nothing outperforms a Nacra Today and nothing will beat a Nacra tomorrow.
